

Textbook of Physiology

The textbook is primarily designed to cater to the needs of the undergraduate medical students. All the 12 sections present updated material sufficient to meet the students expectations from a basic textbook. The entire text is covered in 122 chapters. Emphasis has been laid on describing the concepts of all relevant aspects of physiology, including regulation and integration of body functions and applied aspects. Sketches, tables, charts and flowcharts have been liberally added to make the fundamentals clear and the facts comprehensive to the reader. This is an ideal textbook for undergraduate medical students and a handy review book for postgraduate students. However, students of dental, nursing and allied health sciences, including BSc/MSc (physiology), will find it equally interesting and useful.
