

# Experimentations: John Cage in Music, Art, and Architecture

Experimentations provides a detailed historical and theoretical analysis of the first three decades of experimental composer John Cages aesthetic production (ca. 1940-1972). Paying particular attention to Cages inter- and cross-disciplinary engagements with the visual arts and architecture during this period, the book sheds new light on some of Cages most controversial and influential innovations, such as the use of noise, chance techniques, indeterminacy, electronic technologies, and computerization, as well as upon lesser known but important ideas and strategies such as transparency, multiplicity, virtuality, and actualization. Ultimately, it traces the development of Cages avant-garde aesthetic and political project as it transformed from the emulation of historical avant-garde precedents such as futurism and the Bauhaus, to the development of important precedents for the post-World War II movements of happenings and Fluxus, to its ultimate abandonment in the aftermath of problems encountered in the vast, multimedia composition HPSCHD (1967-69).
