

Essentials of anatomy and physiology; especially adapted for the use of nurses

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1922 Excerpt: ...relaxation. However, the rate of the hearts action is determined chiefly by its nerves and also the correlation of the hearts activity with that of other structures depends upon its nervous connections. As previously stated, the heart is innervated by fibers coming from both the vagus and sympathetic nerves. The way in which the nervous system regulates the hearts action is not positively known, but, it is generally believed, automatic impulses are constantly passing from both the vagus and accelerator centers and those from the vagus tend to decrease the rate and sometimes the strength of the contractions and those from the accelerator (sympathetic) center to increase the frequency and sometimes the strength of the contractions and the normal frequency and strength of the heart beat is due to interaction between the impulses coming from these two sources and playing upon the normal or intrinsic rate and beat of the heart itself. According to one theory, changes in frequency occur ordinarily as the result of afferent impulses or of substances in the blood which affect one or other of the centers, stimulation of one center or depression of its opponent, it is thought, have the same effect; for example, increase in frequency may be due either to depression of the vagus or to stimulation of the accelerator. According to another theory, increased frequency is always the result of inhibition of some part of the vagus mechanism which allows the impulses from the accelerator to have full power, as far as frequency is concerned, but the augmentor (increased strength of contraction) effects are not always permitted. A third theory is that, under

ordinary conditions, the frequency of the heart beat is regulated by the inhibitory center, slight changes in the rate ...
