

Retail Revolution: Supply Chain For Fruits and Vegetables and Major Focus On Emergence of Organized Retailing in India

In today's competitive marketplace, the pressure on organizations to find new ways to shape and deliver value to customers grows ever stronger. Gradually, in emerging economies as well as developed markets, the power of the seller has overtaken that of the customer. Supply chain management not only helps in cutting costs, but also adds to maintaining and improving the quality of fruits and vegetables marketed. Marketing of fruits and vegetables is challenging because of their perishability, seasonality, and bulkiness, and the consumption habits of Indian consumers. In addition to this, poor infrastructure, poor equity in SC, and conventional small-scale unorganized retailers make the state-of-the-art supply chain challenging in the present scenario. The Indian retail market is mainly dominated by unorganized retailers. This book is aimed for young postgraduate students of management. The initial chapters include a brief introduction about fruits and vegetables, the existing scenario, and the current market situation with the importance of the supply chain for fruits and vegetables and the emergence of organized retailing in India.
