

Chemical Peeling

Chemical peeling is one of the most popular procedures now performed by dermatologists, plastic surgeons, and otolaryngologists. Chemical Peeling aims to provide the current information these physicians need to stay up-to-date in this technique. The book begins with histology and wound healing techniques, essential to this practice. The procedures are then introduced with a chapter on general peeling concepts. The bulk of the book is then devoted to step-by-step descriptions of specific peeling techniques, especially superficial and medium-depth peels. 76 color clinical photographs highlight the thorough coverage of the process from initial patient selection and preparation to patient follow-up.
